# UOP introduces Web-Based Training

Refiners continually seek new options to enhance learning and knowledge management for their technical and operating staff. At the same time, they must contend with the challenge of limited budgets and limited resources.

UOP understands these challenges and has developed a new solution that provides you with robust, high-quality training while minimizing your training and travel costs and keeping key resources close to home and their day-to-day responsibilities.

Web-Based Training is a new knowledge management solution from UOP that teaches operators and engineers the basic concepts of UOP process technology in a flexible, self-paced environment that will meet the scheduling needs of any student and the training budget of any organization.

Web-Based Training courses are designed by UOP technical experts for process engineers and operations personnel with up to three years of experience. The interactive sessions cover topics from process overviews and chemistry to catalysts, process variables, process controls and more. The programs use high-quality graphics and animations to enhance understanding and retention.

## Spread the Value of Your Training Budget

Even with the challenge of tightened budgets, your employees need process technology training. Their knowledge and skills will keep your operations running smoothly. UOP Web-Based Training allows you to maintain the quality of your training program while eliminating travel costs and keeping employees on site and at work.

**UOP Web-Based Training is a unique and effective approach to learning that will enhance your training program and your operations.**

- Reduce travel expenses
- Reduce time away from work
- No scheduling conflicts – You set the pace
- Robust knowledge from UOP subject matter experts
- Continually assess employee and training program success

Convenient access also allows more of your staff to take courses that enhance their knowledge and performance.

### Maintain a High Level of Knowledge

UOP Web-Based Training courses are built upon the robust knowledge and unparalleled experience of UOP subject matter experts. Our materials are focused on providing your staff with a strong familiarity of UOP process technology that can enhance the performance of your staff and improve your operations.

In our online courses, students see, hear and do all at the same time, which can dramatically improve retention over just reading or hearing alone. Our interactive, hands-on format, combined with high-quality, highly-educational graphics and animations, ensures comprehension.

Additionally, our format makes certain that all students receive consistent instruction to get all of your employees to the same level of knowledge.

### Monitor the Effectiveness of Your Program

Assessments integrated throughout the courses allow students to track how they're doing and see how much they have learned. Managers can also access metrics and reports to continuously monitor the success of your training program.

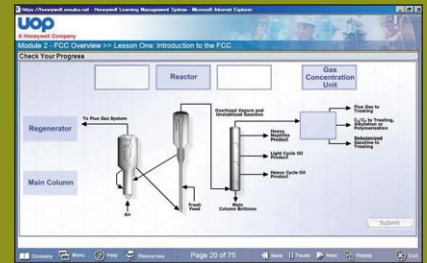

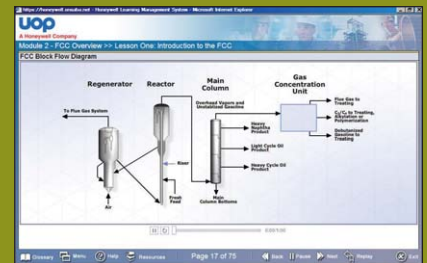

### Train Anytime and Anywhere

No two students learn at the same pace. UOP Web-Based Training is designed for maximum flexibility. Students can start and stop at their own will, skip over familiar material or even repeat difficult topics as needed. Where language barriers are a concern, our online training also allows users to take as much time as they need to properly understand the material.

Sessions typically last from three to seven hours and are broken into hour-long modules that are convenient for any schedule.

UOP Web-Based Training is now available for license holders of several UOP technologies

- UOP FCC process
- UOP Penex™ process
- UOP Unicracking™ process
- UOP Merox™ process
- UOP CCR Platforming™ process

### **An added advantage when combined with classroom training**

As a stand-alone solution, Web-Based Training provides your operators and engineers with the basic process technology concepts that they need to be successful. The courses also serve as an excellent complement to UOP's world-renowned instructor-led training programs. The basic concepts presented online will be briefly reviewed during classroom sessions. With this foundation successfully established, instructors can focus face-to-face training on more advanced topics, including procedures, troubleshooting and optimization.

### **Site Licenses Available**

Site licenses are available for refiners looking to incorporate UOP Web-Based Training as a standard site or company-wide program.

A site license allows for a large number of users and provides regular reporting on student enrollments, percentage complete and assessment results. As standard protocol within your training program, UOP Web-Based Training provides managers with the tools that will enhance learning at their company.

### **More training options from UOP**

In addition to the courses available today, UOP will continue to develop web-based courses for new process technologies and even engineering design topics.

Beyond Web-Based Training, UOP continues to enhance our training portfolio. Based on your valuable feedback, we are developing programs that establish skills and improve knowledge management for our customers.
